

FOR TREE SEEDLING PACKING AND PLANTING

DIEHARD™ Ecto Root Dip

"The Industry's First Complete Bare Root Treatment"

DIEHARD™ Ecto Root Dip is formulated as a bare root treatment with live beneficial mycorrhizal fungi to inoculate the roots of bare root plants before planting. It contains highly selected species of low host specificity ectomycorrhizal fungi that will quickly colonize the roots of bare root plants to provide the best possible conditions for the roots to become as effective during and after planting. The mycorrhizal inoculants are combined with humic acids, biostimulants, beneficial bacteria, soluble sea kelp, yucca plant extracts, to promote rapid root development. The mycorrhizal inoculant is managed with Horta-Sorb® SM which also protects the roots from drying out. The results are better survival and growth rates and less watering for all transplants.

Directions For Use

Mix the contents of each bag with water to form a mixture the consistency of thick gravy. Let stand for 15-20 minutes. Dip roots and plant, or package seedlings for shipment or storage. Adjust thickness of mixture to insure that the gel adheres to the roots when dipping. Product is formulated for small 12" - 18" seedlings. If larger seedlings are treated the number of seedlings treated per lb. is reduced.

Pkg. Size	Water To Mix	No. of Seedlings
3 oz.	5 Gallons	2,000
15 oz.	25 Gallons	10,000
25 lbs.	27 Gallons Per lb.	266,666
