Cost & Use Sheet

For Forest Seedling Nurseries Ornamental Seedling Handlers and Christmas Tree Farmers

Nursery Propagation Drench: Each pound treats 100,000 seedlings. Best application method is a 2-step process. Apply 1-2 weeks just as roots have developed to the sides of cells. Mix with sufficient water to apply as a drench with a backpack sprayer. Care should be taken to ensure that spores applied are drenched into the media to the level of the roots. Second application just as you are hardening off the crop for shipment. One week before and after avoid use of phosphate fertilizers.

DIEHARD™ Ecto Injectable (soluble)

DHEI25 – 30 lb pail = \$979.50

Each pail treats 3 million trees

COST: 33 CENTS PER THOUSAND

Lifting and Packaging Root Gel: Each pound treats 10,000 seedlings. Spray or dip roots when packaging for storage and shipping. Not just a gel root dip but contains Ectomycorrhiza Fungi, Soluble Sea Kelp, Soluble Humic Acid, Soluble Yucca Plant Extract, Beneficial Bacteria and Horta-Sorb® Water Management Gel.

DIEHARD™ Ecto Root Dip

DHERD30 – 30 lb pail = \$358.70

Each pail treats 30,000 trees
